DETAILED ACTION

Allowable Subject Matter

1. Claims 1-22 are allowed.
2. The following is an examiner's statement of reasons for allowance: Claims 1-22 recites specific features in which the prior art of record neither anticipates nor renders obviousness. The closest prior art relevant to applicant's claimed invention is La Porta et al. (US 20020057657) which teaches a method for optimization of tunneling between a home agent and foreign agent, where a mobile device acquires the new foreign agent the home agent is notified and packet data which is received at the home agent is forwarded to the foreign agent and then the mobile device.
3. With respect to Claims 1 and 12, La Porta et al. discloses a handoff system including a first base station (BS9) capable of wirelessly communicating with a source mobile station (mobile device linked with base station, Paragraph 73), a correspondent node (domain root router connects a source base station to the internet and a correspondent node which communicates to a destination, Fig. 2, Items 110 and 150), a mobile switching center (domain root router) capable of connecting a first and second base station (Paragraph 73) and a local IP network capable of transferring data packets associated with said MS-MS packet data call directly between said first and second base stations via a first packet data bearer connection, wherein said first base station is capable of receiving a first message (handoff path setup message transmitted to new

base station to forward to old base station, Paragraph 85-87) from said source mobile station indicating that said source mobile station is to be handed off to a third base station (BS10), and wherein said first base station, in response to said first message, initiates establishment of a second packet data bearer connection on said local IP network for transferring said data packets associated with said MS-MS packet data call directly between said second and third base stations (updates routing entry table for all packets to route from any base station directly to new base station, Paragraph 87).

4. However La Porta et al. fails to disclose or render obvious the base stations communicating with the mobile stations using RAN signaling messages, the correspondent node communicates to a destination mobile station, transferring data packets directly, the mobile switching center authenticates both the source and the destination mobile station to use both the packet call data service and wireless network, and sending an assignment request which is the IP address of the second base station, and receiving an assignment complete message.
5. With respect to claims 2-11 and 13-22 are allowed for being dependent on an allowed base claim.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
